

nervousnet HACKATHON

Let us build digital democracy together!

22nd April, 10^{am}– 23rd April, 4^{pm}, ETH Zurich, Building IFW-A36

1) Design and Development of the nervousnet Backend

Here you find opportunities like e.g. to extend the API of the local analytics engine, implement communication security or integrate web views and an application store.

2) Design and Development of nervousnet Apps

Here you can build your own data-driven applications. Some examples: earthquake detection, localization and navigation, ambient assisting living, smart homes, IoT games and more.

3) The nervousnet Privacy / Accuracy Challenge

Come up with your own data summarization algorithm that guarantees the highest privacy protection level and at the same time performs accurate data analytics.
